Calculation Methods

Year 5

This booklet contains the calculation methods used in year 5 for each of the four operations - addition, subtraction, multiplication and division.

Please use this document as a tool to support your child at home. The methods we use in school may or may not be familiar to you. Children can become confused when they seek support from an adult at home because often, the adult will teach the method they, themselves were taught. Knowing how the methods in this booklet work will help you to help your child. All staff in school use this document so that we can ensure the consistency of our approach.

	National Curriculum Objectives	Mental Calculation	Written Calculation- including concrete, pictorial and abstract methods																																																
Y5 +	<p><u>Add whole numbers with more than 4 digits, including using formal written methods</u></p>		<p><u>Column method for addition including regrouping.</u></p> <p>Children will be working with place value of numbers up to 1,000,000 in year 5 and will continue to build upon the column addition skills they have worked on in Y4 by calculating with numbers with more than 4 digits.</p> <table border="1" data-bbox="958 402 1254 600"> <tr><td></td><td>4</td><td>5</td><td>8</td><td>6</td><td>4</td></tr> <tr><td>+</td><td>2</td><td>3</td><td>4</td><td>9</td><td>7</td></tr> <tr><td></td><td>6</td><td>9</td><td>3</td><td>6</td><td>1</td></tr> <tr><td></td><td></td><td>1</td><td>1</td><td>1</td><td></td></tr> </table> <p>Starting with the ones, add each column in turn. Regroup tens, hundreds, thousands, ten thousands as required.</p> <table border="1" data-bbox="1509 402 1778 587"> <tr><td></td><td>7</td><td>8</td><td>9</td><td>9</td><td>4</td></tr> <tr><td>+</td><td></td><td>6</td><td>7</td><td>4</td><td>3</td></tr> <tr><td></td><td>8</td><td>5</td><td>7</td><td>3</td><td>7</td></tr> <tr><td></td><td></td><td>1</td><td>1</td><td>1</td><td></td></tr> </table> <p>N.B. Children are encouraged to put their regrouped digit wherever they feel suits them best. They are shown different ways and are allowed to choose</p>		4	5	8	6	4	+	2	3	4	9	7		6	9	3	6	1			1	1	1			7	8	9	9	4	+		6	7	4	3		8	5	7	3	7			1	1	1

<p><u>Add numbers mentally with increasingly large numbers</u></p>	<p>Simple mental addition to ensure no errors with column addition.</p> <p>Use of place value to find 10, 100, 1,000, 10,000, 100,000 or 1,000,000 more.</p> <p><u>Negative numbers</u> Find 12 more than -8. Children to use a number line to start with and then use counting through 0 to support with this type of calculation e.g. -8 to 0 = 8. 0 + 4 = 4.</p> <p><u>Number bonds</u> Have a focus on quick and accurate recall of number bonds to 100 (in tens and ones) and to</p>	<p><u>Children will also use this method to add numbers that have up to 3 decimal places</u></p> <p>N.B. Children are given problems which involve adding numbers with differing place value and involving whole numbers added to numbers with decimal places. We teach children to use place holders to help them to line their digits up with the correct place value.</p> <p>$-2 + 3 = 1$</p> 																																																	

National Curriculum Objectives

Mental Calculation

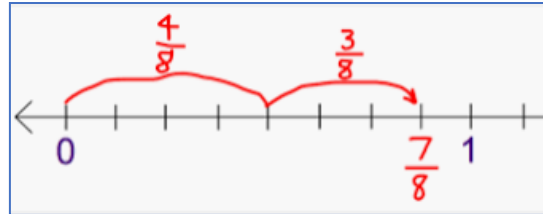

Written Calculation- including concrete, pictorial and abstract methods

1000 (in hundreds and tens) and be able to apply these to larger numbers e.g. $51+49=100$ so $510+490=1000$ and therefore $5100+4900=10,000$ etc.

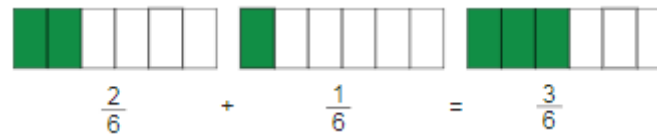

Add fractions with the same denominator and denominators that are multiples of the same number

Adding fractions with the same denominator

Children are taught using a range of different models. They are taught to count in fractions and use number lines to add fractions of the same denominator.

They are also taught addition of fractions using the bar model.

These pictorial representations demonstrate that when adding fractions of the same denominator, only the numerators are added and the denominator stays the same. The children can then use a more abstract method as shown.

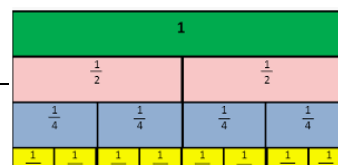

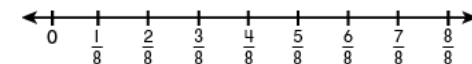

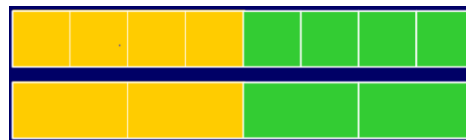

$$\frac{2}{9} + \frac{5}{9} = \frac{7}{9}$$

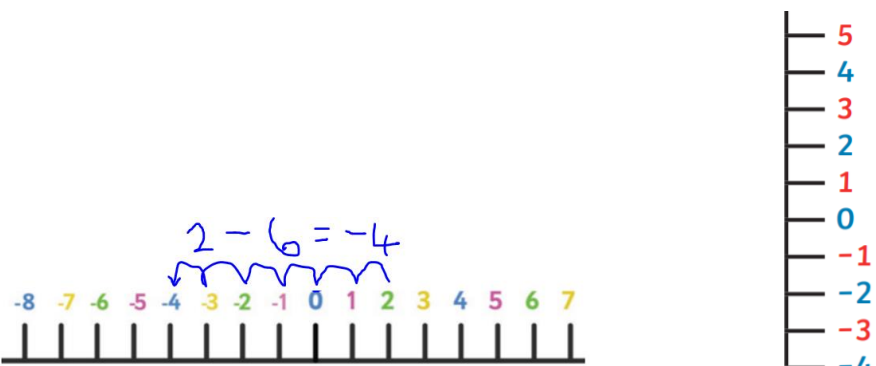

Adding Fractions with denominators that are multiples of the same number.

Children are taught to use their knowledge of equivalent fractions to convert the fractions to the same denominator before adding them.

For example, $\frac{4}{8} + \frac{1}{4}$

First they would convert $\frac{4}{8}$ to $\frac{2}{4}$ at first using pictorial representations (bar model, number line, fraction wall etc) and then the more abstract way of multiplying the numerator and denominator by the same number.

	National Curriculum Objectives	Mental Calculation	Written Calculation- including concrete, pictorial and abstract methods
			Then they would add the numerators together $2/4 + 1/4 = 3/4$
Y5 —	<p><u>Subtract numbers mentally with increasingly large numbers</u></p>	<p><u>Number bonds</u> Have a focus on quick and accurate recall of number bonds to 100 (in tens and ones) and to 1000 (in hundreds and tens) and be able to apply these to larger numbers e.g. $100 - 49 = 51$ so $1,000 - 490 = 510$ and therefore $10,000 - 4900 = 5,100$ etc.</p> <p><u>Compensating and bridging</u> Children are taught to use rounding to support with the mental calculation of subtracting larger numbers e.g. $4,000 - 1998$. Children are to round to the nearest ten, hundred, thousand, ten thousand, hundred thousand dependent on the calculation. $4,000 - 1998$ would be $4,000 - 2,000$ and then the two would need to be added back on.</p> <p><u>Negative numbers</u> Find 12 less than 8. Children to use a number line to start with and then use counting through 0 to support with this type of calculation e.g. $8 - 8 = 0$ and $0 -$</p>	 <p>The diagram shows a horizontal number line from -8 to 7. Above the line, the calculation $2 - 6 = -4$ is written in blue. A blue arrow starts at 2 and moves left to -4, with wavy lines underneath. To the right of the horizontal line is a vertical number line with tick marks from -4 to 5. The numbers are colored: 5 (red), 4 (blue), 3 (red), 2 (blue), 1 (red), 0 (blue), -1 (red), -2 (blue), -3 (red), -4 (blue).</p>

National Curriculum Objectives

Mental Calculation

Written Calculation- including concrete, pictorial and abstract methods

4 leftover = -4

Subtract whole numbers with more than 4 digits, including using formal written methods

Subtract fractions with the same denominator and denominators that are multiples of the same number

Column method for subtraction including exchanging.

Children will be working with numbers up to 1,000,000 in year 5 and will continue to build upon the column subtraction skills they have worked on in Y4 by calculating with numbers with more than 4 digits.

	3	5	⁶ 7	¹³ 4	¹ 2
-		3	4	7	6
	3	2	2	6	6

Starting with the ones, subtract each column in turn.

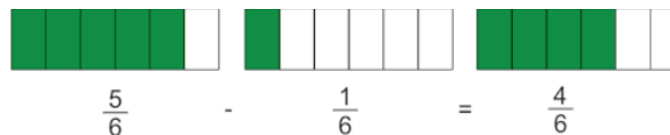

Exchange tens, hundreds, thousands and/or ten thousands as required.

Subtracting fractions with the same denominator.

Children are taught using a range of different models. They are taught to count in fractions and use number lines to add fractions of the same denominator.

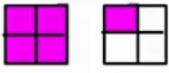

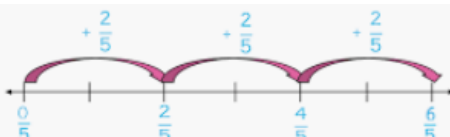

They are also taught subtraction of fractions using the bar model and also represent it using part-whole models.

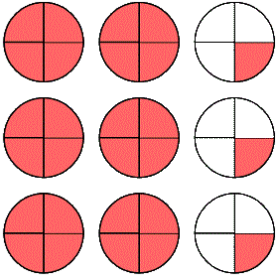

These pictorial representations demonstrate that when subtracting fractions of the same denominator, only the numerators are subtracted and the denominator stays the same. The children can then use a more abstract method as shown.

$$\frac{7}{8} - \frac{2}{8} = \frac{5}{8}$$

	National Curriculum Objectives	Mental Calculation	Written Calculation- including concrete, pictorial and abstract methods																										
			<p><u>Subtracting Fractions with denominators that are multiples of the same number</u></p> <p>Children are taught to use their knowledge of equivalent fractions to convert the fractions to the same denominator before subtracting them.</p> <div style="display: flex; align-items: center;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td><td></td></tr> <tr><td>6</td><td>6</td><td>6</td><td>6</td><td>6</td><td></td></tr> </table> $\frac{5}{6}$ </div> <div style="display: flex; align-items: center; margin-top: 5px;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>1</td><td></td></tr> <tr><td>3</td><td></td></tr> </table> $-\frac{2}{3}$ </div> <div style="display: flex; align-items: center; margin-top: 5px;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td></td><td></td><td></td><td></td><td>1</td></tr> <tr><td></td><td></td><td></td><td></td><td>6</td></tr> </table> $\frac{1}{6}$ </div> <div style="border: 1px solid green; padding: 5px; margin-left: 20px;"> <p>For this they would first recognise that $\frac{2}{3}$ is equivalent to $\frac{4}{6}$ and then subtract $\frac{4}{6}$ from $\frac{5}{6}$.</p> <p>Children will use pictorial representations to support them with calculations. E.g. number lines, bar models and fraction walls.</p> </div>	1	1	1	1	1		6	6	6	6	6		1		3						1					6
